Assessment of Fitness for Work

Anil Adisesh,
Specialist Physician, Occupational Medicine
Dalhousie University
April 15, 2025

Faculty/Presenter Disclosure

- **Faculty:** Anil Adishes, MB ChB, MSc, MD, FRCP, FFOM, FFCI, FRCPC, Hon. FFOM, (Ireland), CIME
- **Relationships with financial sponsors:**
 - **Grants/Research Support:** WSIB Ontario, Canadian Cancer Society, Canadian Immunology Task Force / CIHR, WCBs New Brunswick, Nova Scotia, CanPATH, New Brunswick Innovation Foundation
 - **Speakers Bureau/Honoraria:** N/A
 - **Consulting Fees:** N/A
 - **Patents:** N/A
 - **Other:** Director - OccupAI Inc. start-up in occupational health informatics, Chief Medical Officer at Canadian Health Solutions Inc.

Disclosure of Financial Support

- This program has received financial support from WSIB in the form of an educational grant.
- This program has received in-kind support from – N/A
- Potential for conflict(s) of interest:
 - None

Mitigating Potential Bias

- The information presented in this program is based on recent information that is explicitly “evidence-based”.
- This Program and its material is peer reviewed and all the recommendations involving clinical medicine are based on evidence that is accepted within the profession; and all scientific research referred to, reported, or used in this CME/CPD activity in support or justification of patient care recommendations conforms to the generally accepted standards

Occupational and
Environmental
Medicine

Feedback from Prior Sessions

- No requests for changes / additions

Learning Objectives

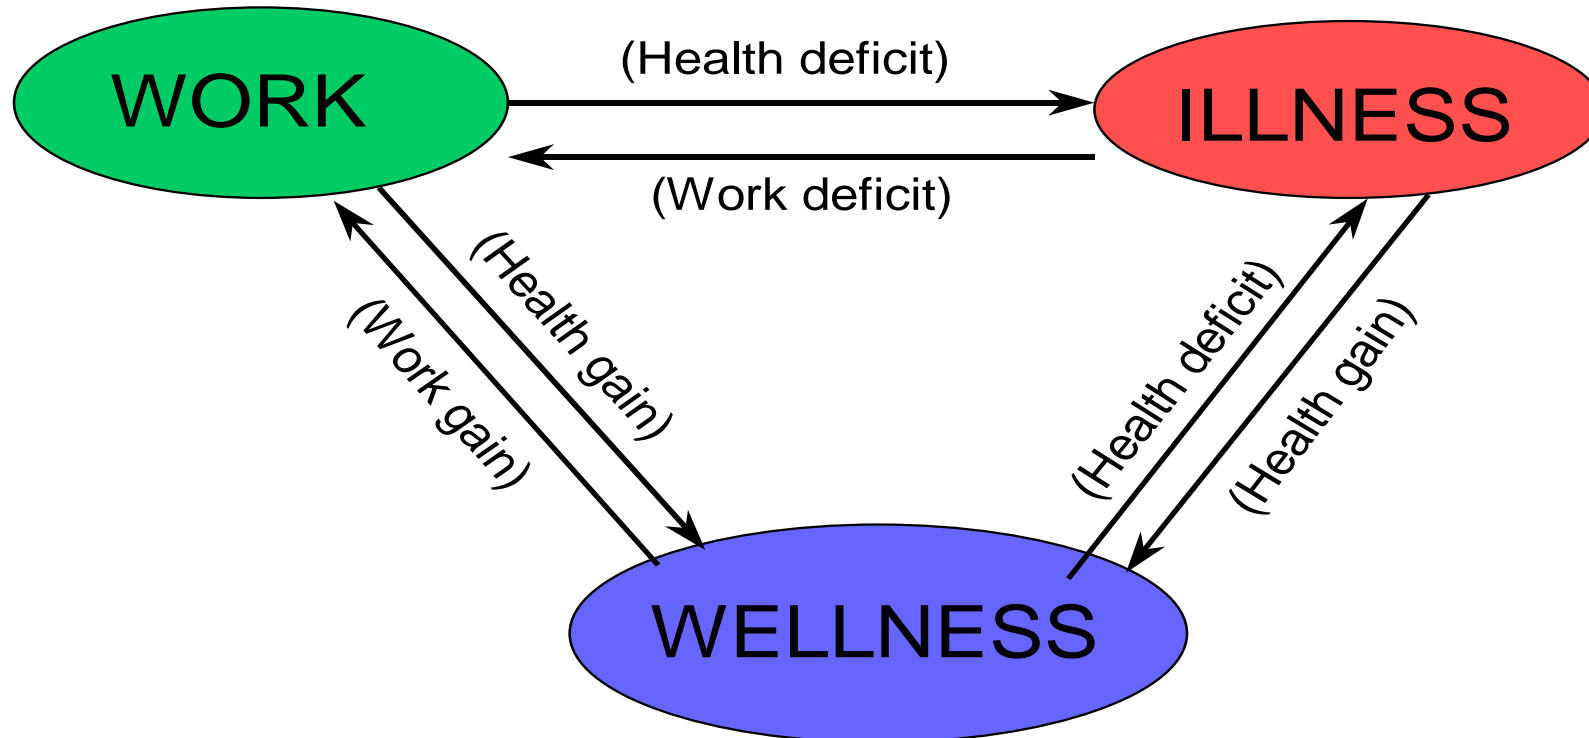

At the end of this session, participants should be able to:

1. Understand and explain the concept of “workability”
2. Apply functional principles to facilitate “workability”
3. Outline the types of barriers to return to work and the role of the physician / healthcare provider in overcoming them

Occupational Health Paradigm

Occupational and
Environmental
Medicine

Sickness Absence Contributors

Total days lost per worker in a year: Canada versus Ontario

Statement of fitness for work
For social security or Statutory Sick Pay

Patient's name

I assessed your case on:

and, because of the following condition(s):

I advise you that:
 you are not fit for work.
 you may be fit for work taking account of the following advice:

If available, and with your employer's agreement, you may benefit from:

- | | |
|--|--|
| <input type="checkbox"/> a phased return to work | <input type="checkbox"/> amended duties |
| <input type="checkbox"/> altered hours | <input type="checkbox"/> workplace adaptations |

Comments, including functional effects of your condition(s):

Sample

This will be the case for

or from to

I will/will not need to assess your fitness for work again at the end of this period.
(Please delete as applicable)

Sick Note to Fit Note

Occupational and
Environmental
Medicine

Why is it Difficult?

Occupational and
Environmental
Medicine

Physician themes:

- Reluctance to return to work
- Feelings about reluctance to return to work
- Resources available
- Communication with employers
- Workers' compensation process

Patient themes:

- Feelings about being off work
- Ready to return
- Satisfaction with physician interaction
- Accommodations and employer pressure
- Workers' compensation

Assessing Work Capacity

Occupational and
Environmental
Medicine

Knowledge base and understanding

Understanding the condition and its effects

Understanding the patient and her context

Understanding the patient's workplace

Skills and resources

Medical competence - essential but not enough

Time - length of observations

Tacit knowledge - beyond the obvious

Trust - uncertainty and dual roles

Reasoning - putting the pieces together

Workability

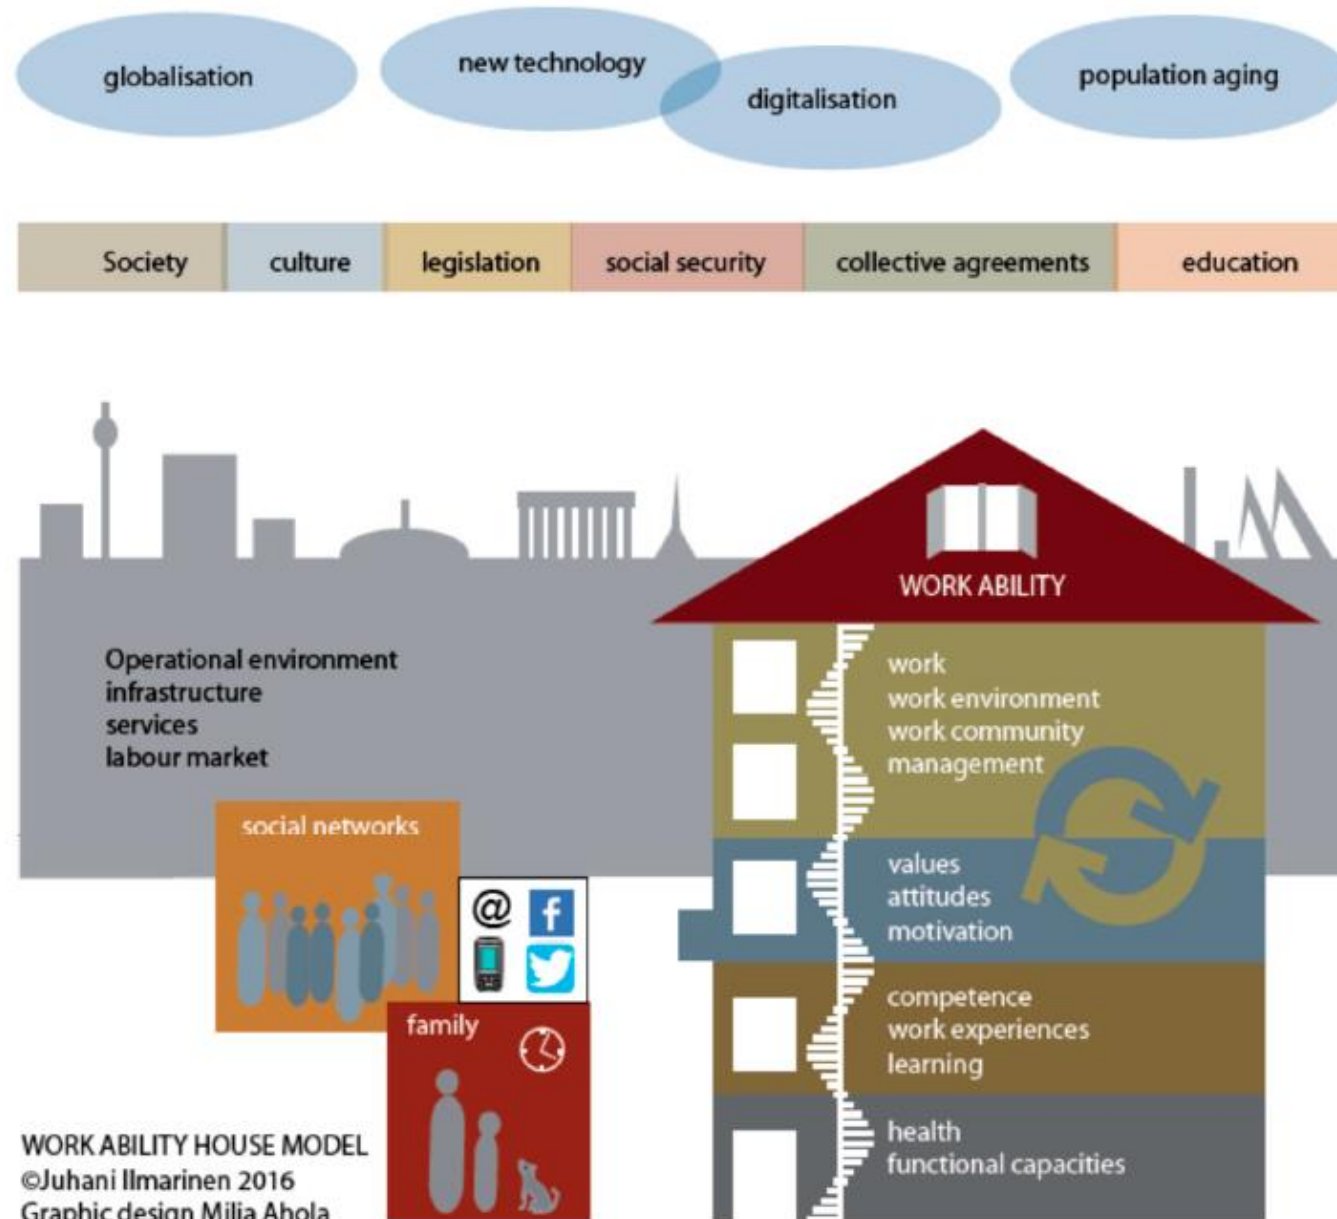

Occupational and
Environmental
Medicine

The Workability House by Ilmarinen

Work Ability Index (WAI)

Items of the Work Ability Index

Items	Range
1 Current work ability compared with the lifetime best	0-10
2 Work ability in relation to the demands of the job	2-10
3 Number of current diseases diagnosed by a physician	1-7
4 Estimated work impairment due to diseases	1-6
5 Sick leave during the past year (12 months)	1-5
6 Own prognosis of work ability 2 years from now	1-7
7 Mental resources	1-4

Occupational and
Environmental
Medicine

Work Ability Index (WAI)

- Incorporated in the ECHO OEM Occupational History Recording Tool

12. Current work ability (*how well you can do your job*) compared to highest work ability ever:
Assume that your work ability at its best has a value of 10 points. How many points would you give your current work ability?

(0 means that you currently cannot work at all)

(10 work ability at its best)

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Question 1

According to the Canadian Medical Association (CMA), the treating physician has a role in helping patients return to work after an illness or injury. Which one of the answers below best reflects how the physician should prepare reports for insurers or employers?

- a) Advocate for the patient's wishes within the report.
- b) Include only information that can be substantiated.
- c) Provide advice on the patient's capacity.
- d) Use routine medical terminology and abbreviations.

Fitness for Work – When?

Occupational and
Environmental
Medicine

- Preplacement
- Statutory periodic certification
 - Marine, Commercial divers, Pilots,
 - Commercial drivers
 - Class A, B, C, D, E and F commercial license, you need to submit a medical report:
 - every five years, under age 46
 - every three years, age 46-64
 - every year, age 65 and over
- Statutory Medical Surveillance
 - Designated Substances under Occupational Health and Safety Act
- Change in medical status may be an obligation to report
- Medical absence from work
- Pension scheme for ill health retirement
- Independent Medical Examination (IME)

Fitness for Work – What?

Occupational and
Environmental
Medicine

- Occupation – job title is a basic requirement
- Job description is useful and should be provided by any employer requesting evaluation
- Job Demands Analysis – tasks, activities and work circumstances
- Ask the worker what they actually do!
- Consider the Job Demands and Accommodation Planning Tool (JDAPT) – asking the worker to complete

Continuum of Disability

Occupational and
Environmental
Medicine

Departures from normal variation that produce:

- Impairments: problems in body function or structure such as significant deviation or loss.
- Activity limitations: difficulties an individual may have in executing activities.
- Participation restrictions: problems an individual may experience in involvement in life situations.

N.B. *Medical restrictions* are those imposed by a clinician i.e. medical advice that certain activities are inadvisable.

Question 2

In helping patients return to work, physicians should:

- a) Encourage patients to let pain be their guide to activity and rest
- b) Provide clinical information about the patient's functional abilities
- c) Make recommendations to the employer for the patient to do specific tasks
- d) Discourage the patient from communicating directly with their employer

Cancer Case Study

Occupational and
Environmental
Medicine

- Beryl, a Registered Nurse on a medical unit
- Beryl's role involved working 12.5-hour shifts, including rotational night shifts. Her job included a significant amount of manual handling due to the specialty of the ward area.
- Her physically demanding job role, involving manual handling and microbiological hazard exposure.

Capacity

Occupational and
Environmental
Medicine

- She was still suffering from several side effects related to her treatments. She had been signed off work for a further two months. Beryl was keen to RTW after this time but had concerns about **manual handling** of heavier patients. She also reported **pain in her left arm**. As surgery involved axillary lymph node excision, she was at increased risk of developing lymphoedema
- Beryl was suffering from **neuropathy affecting her hands, feet** and head following chemotherapy. **Sensory disturbances in her fingers** affected her ability to perform tasks such as buttoning clothes and picking up small objects. Symptoms are expected to reduce once the treatment ceases
- She experienced **severe fatigue** – a common side effect of radiotherapy. Fatigue usually peaks within two weeks of treatment completion but may continue for several months
